Size: 579 rows, 27 columns

Column meanings: (help from [this](#))

Census Blockgroup: the indicating number for that specific group of people that live in an area

Children: percent of people that are children

Children_wNULLvalues: if blank then the source for that category cannot be backed up

Elderly: percent of people 65+

Elderly_wNULLvalues: if blank then the source for that category cannot be backed up

Nonwhite: percent of people that are not white

Nonwhite_wNULLvalues: if blank then the source for that category cannot be backed up

Poverty: percent of people living below 200% of the federal poverty line

Poverty_wNULLvalues: if blank then the source for that category cannot be backed up

Education: percent of people 25+ with at least high school education

Education_wNULLvalues: if blank then the source for that category cannot be backed up

English: percent of people who have limited english speaking abilities

English_wNULLvalues: if blank then the source for that category cannot be backed up

Elevation: lowest elevation in that area

SeaLevelRise: percent of land that is within 36 inches of the sea level rise

Precipitation: percent of land that might get over 6 inches of rain in a 100 year storm

Diabetes: rate of adults 18+ that are hospitalized due to diabetes

Mental Health: hospitalization rate due to mental health diseases/disorders

Asthma: hospitalization rate due to asthma

Disability: percent of people with disabilities

Disability_wNULLvalues: if blank then the source for that category cannot be backed up

HousingQuality: yearly housing violations per 1000 residents

Homeless: number of homeless people per 1000 residents

LivAlone: percent of people who live alone

LivAlone_wNULLvalues: if blank then the source for that category cannot be backed up

FloodHealthIndex: summary of overall flood vulnerability (high number = more vulnerable)

- Note: combines flood exposure, socioeconomic/demographic vulnerability, health vulnerability, and housing vulnerability into a standardized indicator that measures relativity to other blockgroups

FloodHealthIndex_Quintiles: puts the vulnerability on a scale of 1-5 with 5 being the highest

Potential issues:

Does not include the number of white people in the area

Also does not include salaries of people in the area but I'm not sure if that's necessary
